Table of Contents

Preface

Prologue

Plenary lecture

Earth system models and mathematical remarks
J.L. Lions 1

Fluids

$h-p$ adaptive finite element methods in computational fluid dynamics
J.T. Oden and L. Demkowicz 11

Laminar swirling flow and vortex breakdown in a pipe
A. Bottaro, I.L. Rhyming, M.B. Wehrli, F.S. Rys and P. Rys 41

Numerical simulation of hypersonic viscous flow for the design of H−II orbiting plane (HOPE)
Y. Yamamoto 59

Application of superconvergence to problems in the simulation of miscible displacement
R.E. Ewing, J. Shen and J. Wang 73

An exploration of chemically reacting viscous hypersonic flow
J. Argyris, I.St. Doltsinis, H. Friz and J. Urban 85

Non-equilibrium hypersonic flow simulations using the second-order boundary layer equations
M.L. Sawley and S. Wüthrich 129

A new finite element formulation for computational fluid dynamics: X. The compressible Euler and Navier−Stokes equations
F. Shakib, T.J.R. Hughes and Z. Johan 141

Performance of turbulence models to predict supersonic boundary layer flows
F. Hanine and A. Kourta 221

An information system for the numerical simulation of 3D Euler flows around aircraft
J.W. Boerstoel and S.P. Spekreyse 237

Structures

On CAD-integrated structural topology and design optimization
N. Olhoff, M.P. Bendsøe and J. Rasmussen 259

The COC algorithm, Part I: Cross-section optimization or sizing
G.I.N. Rozvany and M. Zhou 281

The COC algorithm, Part II: Topological, geometrical and generalized shape optimization
M. Zhou and G.I.N. Rozvany 309

Structural optimization of I.C. engines subjected to mechanical and thermal loads
B. Balasubramanian, M. Svoboda and W. Bauer 337

A numerical model for buckling and growth of delaminations in composite laminates
B. Cochelin and M. Potier-Ferry 361

Dynamics

Geometrical concepts and computational techniques of nonlinear dynamics
S. Foale and J.M.T. Thompson 381

Rigid and flexible joint modelling in multibody dynamics using finite elements
A. Cardona, M. Geradin and D.B. Doan 395

Defect-mediated turbulence
J. Lega 419

Applied physics

Numerical study of high enthalpy flow in a plasma wind tunnel
T.H. Gogel, M. Auweter-Kurtz, T.M. Gölz, E.W. Messerschmid, H.O. Schrade and P.C. Sleziona 425

Vertical solidification of dendritic binary alloys
J.C. Heinrich, S. Felicelli and D.R. Poirier 435

The Monte Carlo method in science and engineering: Theory and application
K.M. Decker 463

Computing and numerical methods

Integration of solid modeling and finite element generation
H.A. Kamel and L. Chen 485

Studies on parallel processing for coupled field problems
I.St. Doltsinis and S. Nölting 497

Parallelization of CFD codes
C.M. Bergman and J.B. Vos 523

Fourier spectral method on ensemble architectures
R.B. Pelz 529

Fast solver for plane potential problems with mixed boundary conditions
R. Haas and H. Brauchli 543

Author Index 557

Subject Index 561

Instructions to Authors 567
